Projects / Papers Presented

Test Your Idea

<http://tyi.com.au>

March 2020

The Website consists of 4 major parts-

- Part that allows users to design survey-like but fairly basic question and answer options For Ex- Single/Multi-choice and scale answer options The user would only be designing a single question rather than a survey of questions
- Part that allow users to answer other users
- Part that allow basic results to the user of asked questions(simple table and chart)
- Part that presents all the questions that have been asked by users and ranks them accordingly to people voting them interesting and boring

Real Estate Application-Vacayhub

<http://vacayhub.com>

January 2020

This website consists of 3 user interfaces - Traveler, Owner,Admin

- Owner can list his/her property details,necessary info,images and policies.Owner can take subscriptions.Payment is managed through Stripe Payments API.
- Traveler can search and book a property based on preferred locations.Customer Payments will be deducted through his/her debit/credit card through Stripe API
- Admin can see all the owners,customers and properties listed on his application.Can also see bookings,earnings per day/per month. Admin can create plans for owners and can set tax and fees which he will get from each booking

ios Application(API's)

<http://d2ddiary.com>

It is an ios application where a user can add his/her important schedules and events to keep track of his time in busy lifestyle A user can upload a images and audios via scanning.For uploading multiple images user has to take subscription.Subscription Payments are managed through itunes apple payments API.
